Clustered populations

$$\hat{D} = \hat{D}_s \times \hat{E}(s)$$

Density of clusters

Mean cluster size

$$[cv(\hat{D})]^2 = \frac{\widehat{Var}(\hat{D})}{\hat{D}^2} \approx [cv(\text{encounter rate})]^2 + [cv\{\text{detection function}\}]^2 + [cv\{\text{cluster size}\}]^2$$

Bias in estimation of average group size

Mean cluster size estimation

No Size Bias

- Mean of observed sizes does not change with distance

Size Bias

- Smaller clusters less detectable at larger distances
- Mean observed cluster size **increases** with distance

Effect of size bias on sample mean

If size bias is present, $\hat{E}(s) = \bar{s}$ will be positively biased:

Estimating $E(s)$ in the presence of size bias

- Regression methods
 - Include size in model for detection function
 - Stratify by cluster size
 - Truncation of size-biased data
 - Replace clusters by individuals
- } Default method in Distance for Windows
- } Multiple Covariate Distance Sampling
- } Rarely used
- } Applicable for “loose” clusters of individuals

Regression methods

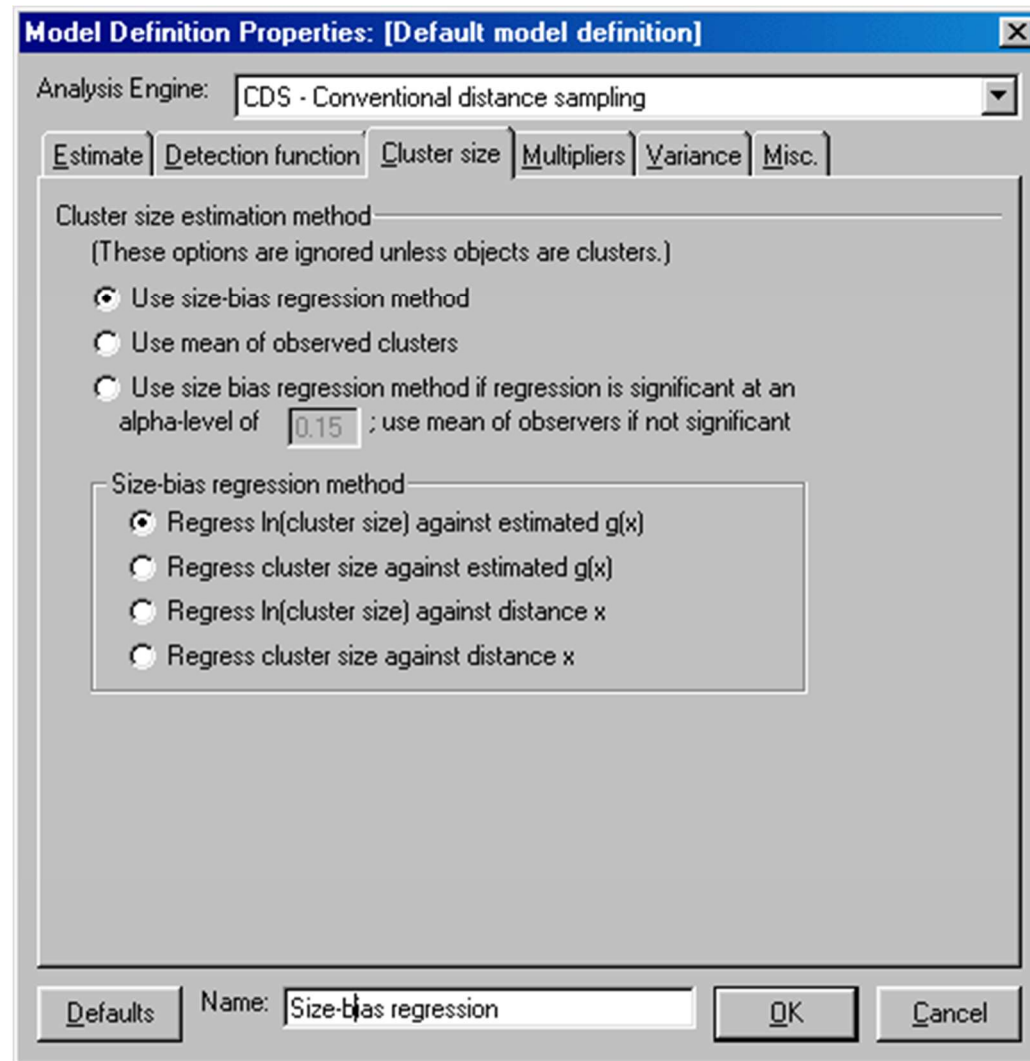

Problems with the linear regression method

- Problem: Relationship between s and x is not linear
 - no relationship when detection is certain (i.e. in the shoulder of the detection function)
- Solution: Linearize by regressing s on $\hat{g}(x)$

- Problem: Variance in s increases with $E(s)$
 - large cluster sizes distort the fit
- Solution: Regress log of cluster size on $\hat{g}(x)$

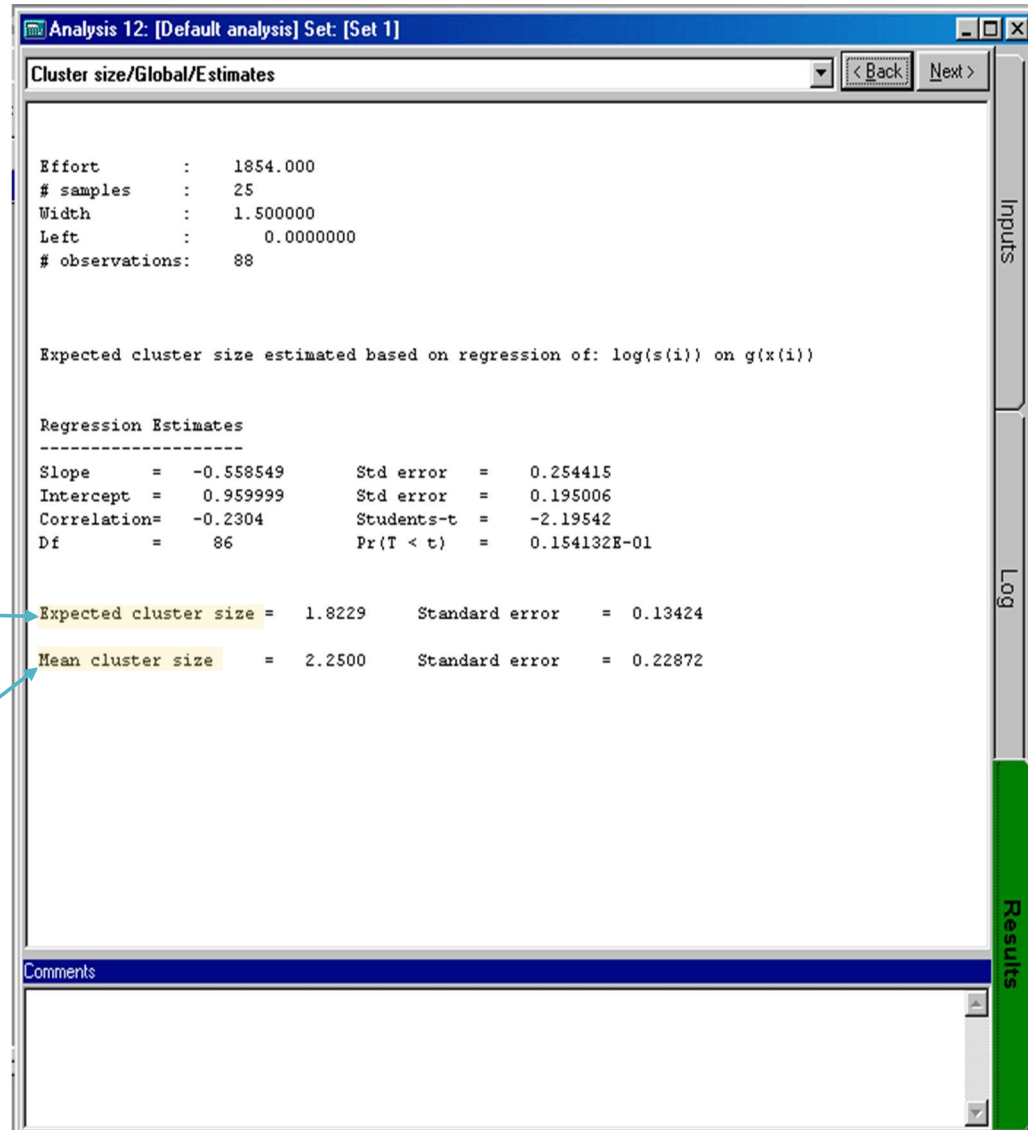

Estimating $E(s)$ in Distance using regression methods

Output of regression estimates

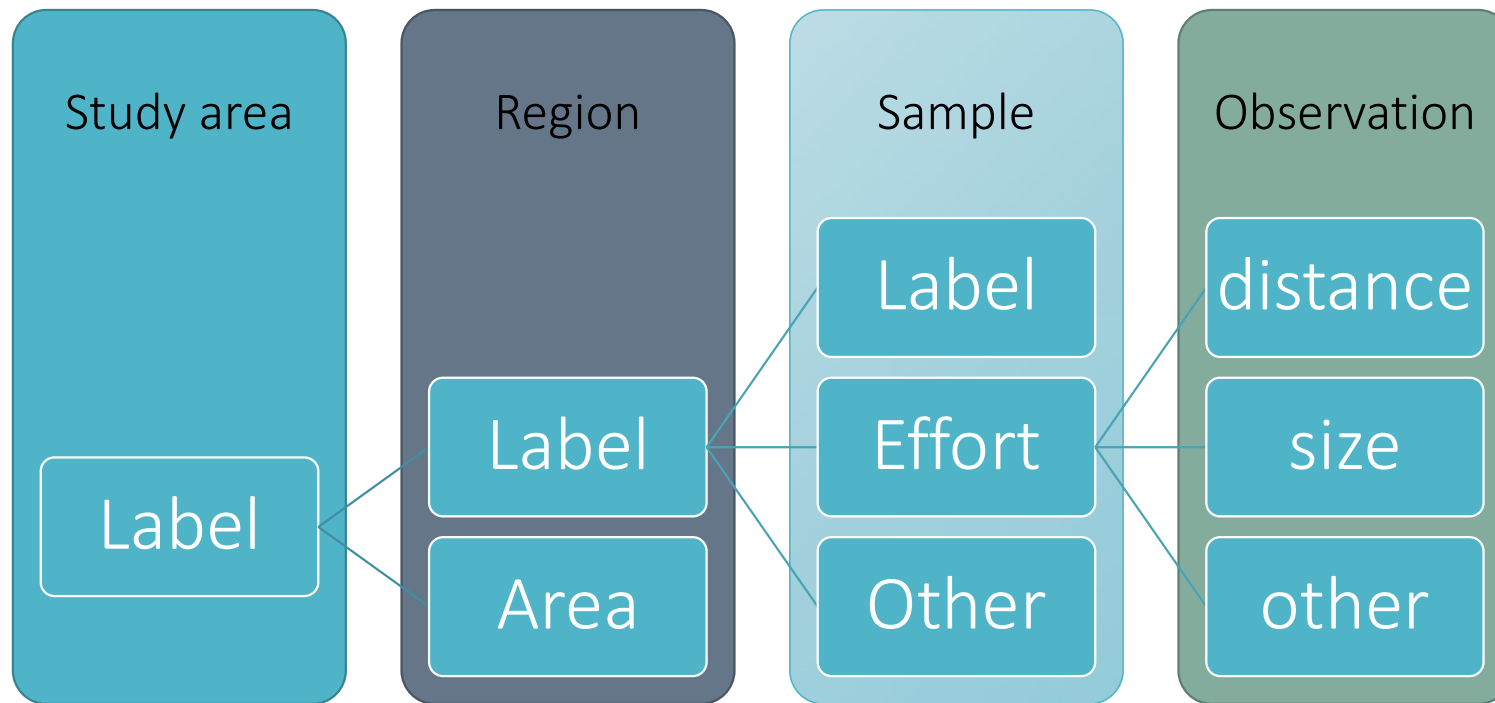

Regression estimate of cluster size

Mean cluster size from data

Data organisation and field issues

Data organisation hierarchy

Get accurate and precise distances

- If size of animal/object is large compared to scale of measurements, define what measurement is to be made (e.g. from line to centre, tallest part, flower, etc)
- If measuring distances to clusters, get the distance to the “centre of the cluster”
- In practice, the mean between closest and furthest away distance might be enough (remember to collect signed distance)
